## Write Code:

1.	Write a	String	class tha	at implei	ments th	e follo	wing fe	atures:

Stores the characters of the string in a character array

Stores the length of the string

## **Functions:**

- String(const char&);
- ~String();
- char\* getCharArray();
- int length();
- char charAt(int index);
- operator +
- operator +=
- operator <<</li>
- 2. Write a stack that stores ints and implements the following functions:
  - Class Stack:
    - Stack();
    - o ~Stack();
    - void push(int);
    - o int peek(int);
    - o int pop();
    - o bool isEmpty();
  - class Node:
    - Node(int, child);
- 3. Write a class to store a Complex Number (an integer real part and an integer imaginary part) that implements the following functions:
  - Complex(int,int);
  - ~Complex();
  - operator+
  - operator-
  - operator+=
  - operator-=
  - operator<</li>
